

Keencut benches are constructed to create the perfect level and stable platform required for reliable accurate cutting.

Exceptionally strong and durable, our benches have been specially engineered to be the optimum surface for Keencut cutter bars. The benches are equipped with fittings to suit specific Keencut machines. The SmartFold Bench accommodates the Evolution3 SmartFold and the BenchTop Bench is designed to house the Evolution3 BenchTop. Our M-Bench range is a modular system which can be configured to suit your work environment and extended if your requirements change.

SmartFold Bench

The SmartFold Bench is specifically designed to create the optimum cutting platform for the Evolution3 SmartFold. It has an extremely strong extrusion built-in, which allows the cutter to fix directly to the bench. The complete stability and perfectly flat surface will ensure reliable and precise accuracy for every cut.

Double SmartFold Bench

The Double SmartFold Bench is designed for specialist cutting applications where you need to trim both edges of an item accurately, without turning the item end-for-end. By fitting an Evolution3 SmartFold on each edge of the bench, you can align cuts quickly and accurately with the Lift-and-Hover system, and swing one or both cutters below the bench if you want to clear the surface. The complete stability and perfectly flat surface will ensure reliable and precise accuracy for every cut.

BenchTop Bench

The BenchTop Bench is specifically designed to create the optimum cutting platform for the Evolution3 BenchTop. The complete stability and perfectly flat surface will ensure that you achieve a reliable and precise cut every time.

M-Bench system

Whether you require a straight, T or L shaped configuration, the M-Bench will create the perfect, stable cutting solution for your needs. It is ideal for the Sabre, Simplex and other general purpose Keencut cutting machines. The M-Bench has a modular construction which can be configured to suit your work environment and extended if your requirements change.

Strong, secure and stable

Keencut benches provide the strong and solid foundation required for precise, accurate cutting. The unique patented Proteus construction method creates a secure and rigid workbench that will not lose any stability over time. Strength and stability are vital to ensure that you achieve optimum clamping and repeatable, reliable cutting across the full length of the cutter bar. The Proteus construction is easy to assemble, and the internal fittings are concealed for a flush finish and maximum safety under heavy load.

Level surface adjustment

Adjustable feet deliver precise levelling on uneven floors and maintain the flatness required to obtain precise cutting accuracy.

Cantilever extension

Due to the integral strength of the Proteus construction, Keencut benches can be extended using a cantilever system to accommodate a 1.525m (5') standard width board as a worktop. The extension kit is included as standard with the SmartFold and BenchTop benches.

A versatile solution

Keencut benches offer a versatile solution that lets you create a bench to suit your particular requirements. When your business grows you can easily add other pieces.

Different worktops

Keencut benches will accommodate any style of worktop, including glass. Please note, worktops are not included.

Five year guarantee

Built from high-grade aluminium alloy, Keencut benches offer a lifetime of service. The clean good looks are maintained through a quality anodising process. By manufacturing in-house with only the highest quality materials, Keencut is confident to offer a comprehensive five year guarantee.
